About the Ignorance Survey US

For the Ignorance Surveys Gapminder develops questions with clear-cut response alternatives for web-based survey together with the Swedish company Novus International AB <http://www.novus.se/english.aspx>. The survey in the US was conducted in collaboration with the GfK Group using KnowledgePanel, its nationally representative online research panel. KnowledgePanel members are recruited through probability sampling methods and include both those with internet access and those without. KnowledgePanel provides internet access for those who do not have it and, if needed, a device to access the internet when they join the panel. For more information about the KnowledgePanel, see <http://join.knpanel.com/>.

The aim with these surveys is to understand how pronounced and how frequent the ignorance about major global development trends is among the public in different countries, especially regarding the order of magnitude and speed of change of the most important aspects of the life conditions of the world population. In this report we disclose the results. The CORRECT answer is marked and below each question is the data source.

To conduct the surveys Gapminder has worked together with the Swedish research company Novus Group International. Novus has supported Gapminder in designing adequate questions, the survey methodology in general and analysis. In Sweden the survey was conducted in Novus online panel, with a nationally representative, probability-based sample of the Swedish population. In Sweden we have conducted more than 9000 interviews within the scope of the Ignorance Project during the spring and fall of 2013.

The Ignorance Surveys have been conducted in four countries so far in 2013: Sweden, Norway, U.K and the U.S
